Resources on MPAs and COVID-19: Biodiversity conservation during COVID - Impacts on the marine environment and economy - Grants

This year amid the ongoing COVID-19 pandemic, MPA News has been compiling related resources for our readers. Here is our latest collection:

Journal article

Opinion: Biodiversity conservation during a global crisis: Consequences and the way forward *PNAS* 117 (48). The pandemic has shown that seemingly extreme solutions and their implementation, such as a mandatory lockdown of human activities for a specific duration, can result in rapid and visible changes in environmental variables. Such solutions, if repeated over time for conservation purposes, could play a role in helping to restore the planetary environment, or at least delay tipping points of future environmental crises.

Report

The environmental impacts of COVID-19: Perspectives from fishing communities Published by COBI, this report reflects perceptions from 161 interviews (33 women, 128 men) about impacts of the pandemic on Mexico's marine environment and economy. Roughly half of the interviewees live or work near an MPA. The report covers topics including MPA and fisheries management, waste management, and more. It is also available in Spanish.

Grants

BIOPAMA Rapid Response Grants are available to support protected areas (terrestrial and marine) facing the COVID-19 pandemic in African, Caribbean, and Pacific countries. The call is open until 31 December 2020. Maximum grant size is 50,000 euros with no co-financing required.
